

Lean Six Sigma Yellow Belt (2 Days)

Background

The concept of Lean Manufacturing was developed in the early 1990s from studies of the Toyota Production System. It focuses on eliminating waste in processes, waste being anything that impedes the flow of product as it is being transformed in the value chain. Six Sigma originated in the U.S. in the mid-nineties and was adopted by GE to deliver significant bottom line savings to the business. Six Sigma focuses on process variation and aims to develop predictable processes through the application of a structured program.

This two day course introduces the fundamental lean and six sigma tools employed by teams in business process improvement projects.
